Introduction

The Uniden UH089NB is designed to provide you with years of trouble free service. Its rugged components and materials are capable of withstanding harsh environments. Please read this Operating Manual carefully to ensure you gain the optimum performance of the unit.

NOTE

The citizen band radio service is licenced in Australia by ACMA Radio-communications (Citizen Band Radio Stations) Class Licence and in New Zealand by MED General User Licence for Citizen Band Radio and operation is subject to conditions contained in those licenses.

Features

- Narrow Band (NB) 80 Channel Radio*
 - Transmission Power 5W
 - Built-in AVS Circuitry†
 - LCD Display with Backlight/Dimmer
 - Signal Strength Meter
 - RF Power Meter
 - Instant Channel
 - One touch Instant Channel recalling
 - Duplex Capability (from CH01 - CH08 and CH41 - CH48 per channel)
 - Group Scan and Priority Channel Watch
 - Open Scan
 - Scan Channel Memory On/Off separately with Open Scan, Group Scan
 - Rotary Channel Select
 - Busy Channel Lock-out Function
 - Roger Beep Function On/Off
 - 5 Different Call Tones
 - 38 Built-in CTCSS (Continuous Tone Coded Squelch System) and 104 additional DCS (Digital Coded Squelch) codes that are user selectable
 - Variable Squelch Level adjust
 - Volume Control with Power On/Off Switch
- * Refer to p.20 - p.22 for channel information
- † AVS - Automatic Volume Stabilizer detects and manages incoming audio to comparable levels.

Introduction

Preventive Maintenance

The following system checks should be made every six to twelve months:

- Check the Standing Wave Ratio (SWR).
- Inspect the tightness of all electrical connections.
- Inspect the antenna coaxial cable for wear or breaks on the shielding.
- Inspect the tightness of all screws and other mounting hardware.

Troubleshooting

Should the unit malfunction or perform poorly, follow these procedures:
If the transceiver is completely inoperative: Check the power cord and fuse. If there is trouble with receiving: Check the VOLUME control setting. Be sure the SQUELCH is adjusted properly. Possibly the radio is over-squelched.

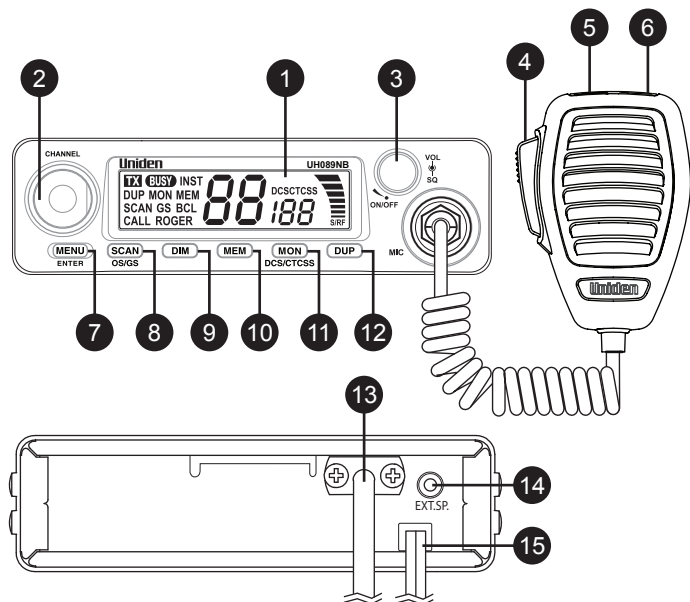

If there is trouble with transmitting: Check that the transmission line (coaxial cable) is securely connected to the ANTENNA connector. Check that the antenna is fully extended for proper operation. Check that all transmission line (coaxial cable) connections are secure and free of corrosion.

NOTE

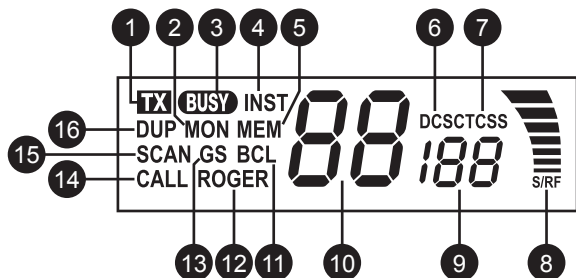

Blackening may occur on the Liquid Crystal Display if the UHF CB Radio has been subjected to extreme high temperature (above 60°C). This is not a fault. Normal LCD operation resumes when the temperature stabilizes back to standard operating condition (0-55°C).

Controls & Connectors

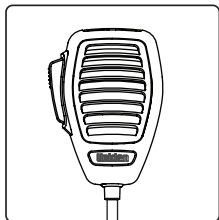

- | | |
|--|--|
| 1 Liquid Crystal Display (LCD) | 9 DIM - Backlight Dimmer |
| 2 Rotary Channel Selector | 10 MEM - Memory Scan Channels |
| 3 On/Off Volume & Squelch | 11 MON - DCS/CTCSS - Monitor and DCS/CTCSS Tone button |
| 4 Push to Talk (PTT) Switch | 12 DUP - Duplex On/Off |
| 5 Call Button | 13 UHF Antenna Connection |
| 6 Instant Button | 14 External Speaker Jack |
| 7 Menu/Enter - Select Button | 15 Power Input (13.8V DC) |
| 8 SCAN - Scan On/Off
OS/GS - Open Scan/
Group Scan | |

Indicators

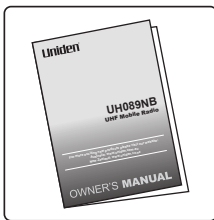

- | | |
|---|-------------------------------|
| 1 TX - Transmit | 9 188 - DCS/CTCSS Code number |
| 2 MON - Monitor | 10 88 - Channel Number |
| 3 BUSY - Receiving | 11 BCL - Busy Channel Lockout |
| 4 INST - Instant Channel | 12 ROGER - Roger Beep |
| 5 MEM - Memory Scan Channel | 13 GS - Group Scan |
| 6 DCS - Digital Coded Squelch System | 14 CALL - Call Tone |
| 7 CTCSS - Continuous Tone Coded Squelch System | 15 SCAN - Scan Mode |
| 8 S/R/F - Receive Signal or Transmit RF Power Level Meter | 16 DUP - Duplex |

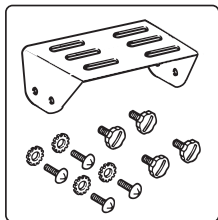

Included with your UH089NB Transceiver

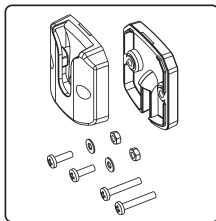

Standard Microphone

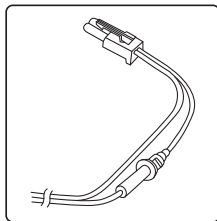

Owner's Manual

Mounting Bracket,
Mounting Screws,
Washer Stars
& Screws

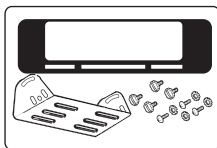

Microphone Hanger,
Screws & Washers

DC Power Cord
with fuse

Optional Accessories

DIN Mounting Kit
(DMK8990)

External Speaker
(MS100)

Operation

Turn on the Power and set the Volume

Turn the unit ON by rotating the volume control clockwise. Set the volume to a desired level.

Setting the Squelch

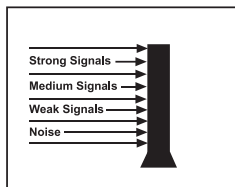

Turn the outer ring of the control to adjust the Squelch.

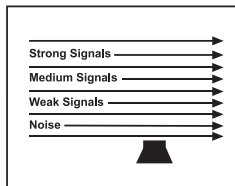

NOTE

You must select a channel which is not in use before setting the SQUELCH control (see Selecting a Channel , page 10).

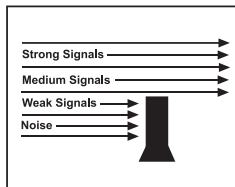

Operation

Think of the squelch control as a gate. If you turn Squelch fully clockwise it raises the 'Squelch gate' so high that no signals get through.

If you turn the Squelch fully counterclockwise it lowers the 'Squelch Gate' to the extent that all signals get through - weak, medium and strong signals and noise.

To set the 'Squelch Gate' to the desired level, turn the squelch knob counterclockwise until you hear noise. Then carefully turn the Squelch knob clockwise until the noise fades. Now only strong signals get through.

Operation

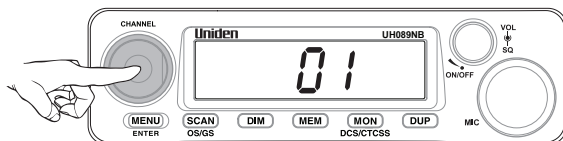

Monitor

Press **[MON]** to open the squelch and receive all weak signals. Press **[MON]** again momentarily to cancel.

Selecting a Channel

Turn the Rotary Channel Selector to select the desired channel.

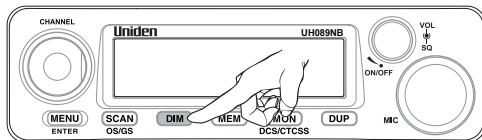

NOTE

For your reference a list of the available channels, corresponding frequencies and guidelines for their use is printed on page 20. For Australia, Channels 05 and 35 are reserved for Emergency Calls.

Set the LCD Dimmer

Press **[DIM]** to set the LCD backlight dimmer between high and low.

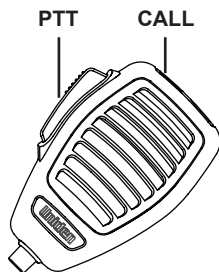

Operation

Transmitting

The UH089NB uses the 80 UHF-CB Channels **For your reference a list of the available channels, corresponding frequencies and guidelines for their use and selection is printed on page 20. For Australia, Channels 05 and 35 are reserved for Emergency Calls.**

Select the desired channel. Press the microphone's PTT button and speak normally into the microphone. Hold it approx. 7cm from your mouth. Release the PTT button to end the transmission and listen for a reply.

Call Function

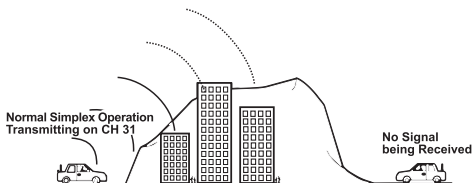

Press the microphone Call Button. A two or three second ringing tone will be transmitted. You may select from 5 types of tones (see p.16).

Current regulations require calling tones to be restricted to one transmission per minute. If a second transmission is attempted within one minute then an error tone will sound.

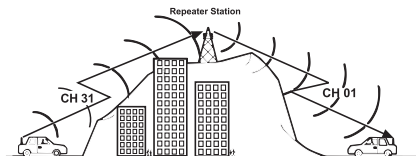

Using Repeater Channels

UHF CB repeaters are used to retransmit or relay your signal. Repeaters will extend the range of your radio and overcome the shielding effect caused by solid obstructions. In normal Simplex operation, your radio transmits on one particular frequency and receives on that same frequency. If there is a barrier that partially blocks your transmitted signal, the probability of another radio receiving the signal is very slim. Hills, tall buildings, metallic structures,...etc tend to act as a screen between radios.

Operation

Standard Operation without the aid of a Repeater station.

Operation with the aid of a Repeater Repeater Station (Duplex).

The signal coming from your radio is received by the Repeater Station and the re-transmitted at the same time on another channel. This operation is called “Duplexing”.

For example,

CH01 on Duplex Mode will Receive on CH01 but Transmit on CH31

CH02 on Duplex Mode will Receive on CH02 but Transmit on CH32

etc...

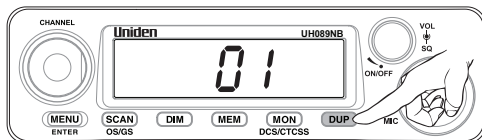

If you transmit on CH01 Duplex mode, you are actually transmitting on CH31 the repeater station down-converts your signal and retransmits on CH01.

Operation

Operating the UH089NB in Duplex Mode

For this example we are adopting CH01 as the channel being used in your area for repeater use.

Press **[DUP]** to switch Duplex On. If Duplex is not required - press **[DUP]** again to switch Duplex off. Only channels 01-08 and channels 41-48 are available for Duplex.

Check with your local Retailer for information on available repeaters.

Scanning

The UH089NB has a scanning feature that allows you to search for active channels automatically.

Furthermore, the UH089NB is designed to have two types of scanning; Open Scanning (OS) and Group Scanning (GS), to give you flexibility and allow you to use the radio more effectively. Press **[SCAN]** and Scanning starts. The **SCAN** icon appears. The scan direction can be changed at any time by rotating the channel selector left or right.

Operation

Open Scan (OS) Mode

Allows continuous scanning of all selected channels.

If an active channel is found, scanning will stop on that channel.

If the received signal ceases, the unit will wait 3 seconds for the signal to return, otherwise scanning resumes.

After transmission in scan mode, the unit will wait 20 seconds for the signal to return, otherwise scanning resumes.

To remove the active channel from scan memory, press **[MEM]** momentarily. Scanning resumes. To deactivate SCAN, press **[SCAN]**.

NOTE

If SCAN is deactivated while on an active channel, the UH089NB will stay on that active channel. If no channels are active, the UH089NB will reinstate the starting channel.

NOTE

OS Mode is indicated by the absence of the GS icon.

Operation

Group Scan (GS) Mode

Allows you to monitor a Priority (Instant) Channel while scanning (see Instant Priority channel, page 18).

To activate or deactivate GS mode press and hold **[OS/GS]**.

GS icon appears on the display in GS mode.

GS Scanning checks the Instant Priority Channel for activity regularly.

If the Priority Channel becomes active the radio will stay on that channel for as long as the signal is present. If the received signal ceases, Priority Scanning continues after 3 seconds.

If scanning stops on a channel which is not a Priority Channel, UH089NB will continue monitoring the Priority Channel for activity while listening to the active one.

To activate or deactivate SCAN, press **[SCAN]**.

NOTE

If SCAN is deactivated while it is tuned to an active channel, the UH089NB will stay on that active channel.

If none of the channels are active, the UH089NB will reinstate the scan start channel.

NOTE

If OS/GS Scanning is initiated when there are no channels programmed in OS/GS memory, an error tone will be heard and scanning will not start (see Programming Scan Channels, page 16).

Operation

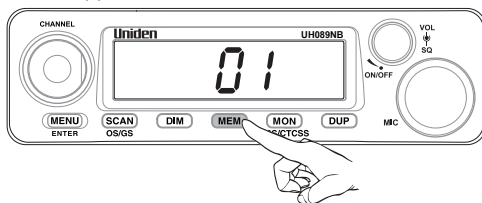

Programming Scan Channels

Select which Scanning Mode you wish to use - OS or GS.

Select the channel you want to store.

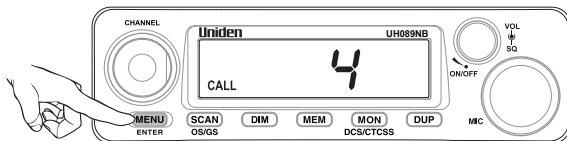

Press **[MEM]** to store. MEM icon appears and a short tone beep is heard.

To remove the channel from Memory, press **[MEM]** once more. The MEM icon disappears.

Selecting the Call tone

Press **[MENU]** once. Turn the Rotary Channel Selector to change the setting between 1, 2, 3, 4 and 5. Press and hold **[MENU]** for 2 seconds to store the new setting.

If a button is not pressed within 10 seconds the UH089NB will automatically exit the Menu Mode.

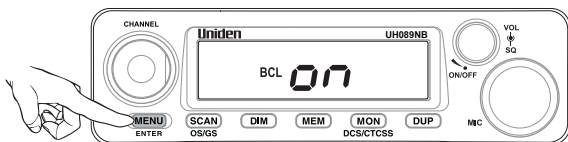

Operation

Busy Channel Lockout

If the channel is already in use, you can prevent the UH089NB from transmitting. This is particularly important when using CTCSS or DCS.

Press **[MENU]** 2 times. Turn the Rotary Channel Selector to display **0n**.

Press and hold **[MENU]** for 2 seconds to store the new setting.

NOTE

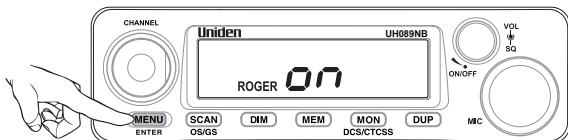

If a button is not pressed within 10 seconds the UH089NB will automatically exit the Menu Mode.

Roger Beep

A Roger Beep may be added to the end of transmission.

Press **[MENU]** 3 times. Turn the Channel Selector to display **0n**.

Press and hold **[MENU]** for 2 seconds to store the new setting.

NOTE

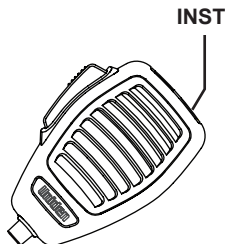

If a button is not pressed within 10 seconds the UH089NB will automatically exit the Menu Mode.

Operation

Programming the Instant Priority Channel

Turn the Rotary Channel Selector to select the Priority Channel you prefer.

Press and hold **[INST]** button on the microphone for 2 seconds to store the new setting. INST icon appears.

Recalling the Instant Channel

Momentarily press the **[INST]** button on the microphone to return to the Instant Channel. To return to the previous channel press **[INST]** button once more.

CTCSS (Continuous Tone Coded Squelch System)

Turn the Rotary Channel Selector to the desired channel to use CTCSS.

Press and hold **[MON]** for 2 seconds. CTCSS icon appears.

Turn the Rotary Channel Selector to select the desired CTCSS code 01 - 38.

Press **[MON]** once to store the new setting. To turn off CTCSS (or DCS) select the oF code during setting.

Operation

DCS (Digitally Coded Squelch)

DCS is a digital extension of CTCSS. It provides 104 extra, digitally coded, squelch codes that follow after the 38 CTCSS codes. CTCSS 1-38, followed by DCS 1-104.

Follow the steps for setting a CTCSS code. Turn the Rotary Channel Selector until the DCS codes appear. Press **[MON]** to set. The **DCS** icon and code will display.

NOTE

Channels 5 and 35 are used for emergency channels. CTCSS and DCS will not operate on these channels.

UHF CB Channel Guidelines

NOTE

Always listen on a channel (or observe the receive signal level meter) to ensure it is not already being used before transmitting.

Channels 5 and 35 are used for emergency channels.
CTCSS and DCS will not operate on these channels.

Please follow these guidelines for channel use in Australia:

- Channels 05 and 35 are Emergency Channels.
- Channel 11 is a Calling Channel.
- Channels 22 and 23 are for telemetry and telecommand applications, channels 61, 62 and 63 are for future use and TX is inhibited on these channels.

General communication is accepted on all other channels with these guidelines:

- Channel 40 - road channel (Australia).
- Channels 01-08 (and 31-38), and Channels 41-48 (and 71-78) are repeater channels.

Important information - 80 Channel UHF CB channel expansion

To provide all users additional channel capacity within the UHF CB Band. The ACMA will change the majority of the current wideband 40 channel use to narrowband channel use. This allows for additional channels to be added, up to 80 Channels.

This simply means that the new narrowband radio you have purchased will have more channels than older radios. Please refer to the guidelines above and the channel chart for further channel information.

A list of currently authorised channels can also be obtained from the ACMA website in Australia and the MED website in New Zealand.

NOTE

Interference / Poor Audio

When a new narrowband radio receives a signal from an older wideband radio the speech may sound loud - however the UH089NB's built-in AVS (Automatic Volume Stabilizer) circuitry will detect and manage incoming audio to comparable levels.

Narrowband radios operating on CH41 - CH80 may encounter interference from a nearby wideband radios transmitting on high power on an adjacent channel (frequency).

When an older wideband radio receives a signal from a new narrowband radio the speech may sound quiet - the wideband radio user simply adjusts their radio volume for best performance.

The above situations are not a fault of the radio but a symptom of mixed wideband and narrowband radios in current use. It is expected that as older wideband radios are phased out this issue will be eliminated.

UHF CB Channels & Frequencies

CH No.	Simplex Mode Transmit / Receive Frequency (MHz)	Duplex Mode Transmit Frequency (MHz)	CH No.	Simplex Mode Transmit / Receive Frequency (MHz)
1	476.425	477.175 (CH31)	21	476.925

Three-year Limited Warranty

UNIDEN UH089NB UHF CB Transceiver

Important: Satisfactory evidence of the original purchase is required for warranty service

Warrantor: The warrantor is either Uniden Australia Pty Limited ABN 58 001 865 498 ("Uniden Aust") or Uniden New Zealand Limited ("Uniden NZ") as the case may be.

Terms of Warranty: Uniden Aust/NZ warrants to the original retail purchaser only that the UH089NB ("the Product"), will be free from defects in materials and craftsmanship for the duration of the warranty period, subject to the limitations and exclusions set out below.

Warranty period: This warranty to the original retail purchaser is only valid in the original country of purchase for a Product first purchased either in Australia or New Zealand and will expire three (3) years from the date of the original retail sale.

If a warranty claim is made, this warranty will not apply if the Product is found by Uniden to be:

- (A) Damaged or not maintained in a reasonable manner or as recommended in the relevant Uniden Owner's Manual;
- (B) Modified, altered or used as part of any conversion, kits, subassemblies or any configurations not sold by Uniden Aust or Uniden NZ;
- (C) Improperly installed contrary to instructions contained in the relevant Owner's Manual
- (D) Repaired by someone other than an authorized Uniden Repair Agent in relation to a defect or malfunction covered by this warranty; or
- (E) Used in conjunction with any equipment, parts or a system not manufactured by Uniden.

Parts Covered: This warranty covers the Product and included accessories.

User-generated Data: This warranty does not cover any claimed loss of or damage to user-generated data (including but without limitation phone numbers, addresses and images) that may be stored on your Product.

Three-year Limited Warranty

Statement of Remedy: If the Product is found not to conform to this warranty as stated above, the Warrantor, at its discretion, will either repair the defect or replace the Product without any charge for parts or service. This warranty does not include any reimbursement or payment of any consequential damages claimed to arise from a Product's failure to comply with the warranty.

Our goods come with guarantees that cannot be excluded under the Australian Consumer Law. You are entitled to a replacement or refund for a major failure and for compensation for any other reasonably foreseeable loss or damage. You are also entitled to have the goods repaired or replaced if the goods fail to be of acceptable quality and the failure does not amount to a major failure.

This warranty is in addition to and sits alongside your rights under either the COMPETITION AND CONSUMER ACT 2010 (Australia) or the CONSUMER GUARANTEES ACT (New Zealand) as the case may be, none of which can be excluded.

Procedure for obtaining warranty service: Depending on the country in which the Product was first purchased, if you believe that your Product does not conform with this warranty, you should deliver the Product, together with satisfactory evidence of your original purchase (such as a legible copy of the sales docket) to Uniden at the addresses shown below. You should contact Uniden regarding any compensation that may be payable for your expenses incurred in making a warranty claim. Prior to delivery, we recommend that you make a backup copy of any phone numbers, images or other data stored on your Product, in case it is lost or damaged during warranty service.
